

Profile

Data and AI specialist with a BSc in Artificial Intelligence, currently working in ValueCare’s GGZ data stack on healthcare analytics and predictive modeling with Python and SQL. Comfortable turning messy clinical source data into reliable, production-grade models and pipelines under strict privacy and compliance constraints. An entrepreneurial builder who has also shipped two live AI products end to end, now focused on deepening into the data craft within healthcare.

Technical Skills

Programming	SQL, Python, Java
Data & Databases	Data modeling, data quality, query optimization, ETL workflows, Pandas, NumPy
AI & Machine Learning	Predictive modeling, model evaluation, machine learning, LLM applications (Claude / Anthropic API), RAG, prompt engineering, scikit-learn, PyTorch
Tools & Web	FastAPI, Next.js, Supabase, Stripe, Docker, Git / GitHub
Foundations	Statistics, probability, mathematical modeling
Languages	English, Dutch

Experience

Working Student, Data & AI

ValueCare

May 2025 – Present

Amsterdam, Netherlands

- Develop and evaluate predictive models on real healthcare data to support clinical and operational decision-making.
- Build Python data and machine-learning workflows for healthcare analytics on production data under strict privacy and compliance constraints.
- Contribute to applied AI and NLP features that turn clinical data into reliable, practical tooling for healthcare professionals.
- Developed a ROM clinical-score prediction pipeline from therapy transcripts and reports using LLM prompting, ensemble methods and calibration, reaching an MAE of around 12 points with preserved variance, designed to scale across healthcare institutions.

Founder & Solo Full-Stack Engineer

SubsidieMatch

2025 – Present

subsidiematch.com

- Built and launched a live, paying B2B/B2C SaaS that reads Dutch contractor quotes with a vision-language model and matches the extracted equipment against 7,729 RVO subsidy codes, returning exact meldcodes and amounts in around 30 seconds.
- Own the full stack end to end: FastAPI backend, Next.js 14 frontend, Supabase (authentication + row-level security), and Stripe billing, deployed on Railway and Vercel.
- Engineered deterministic, reproducible LLM extraction using SHA-256 content hashing and version-pinned prompts, reaching 91.3% matching accuracy on the first production run.

Co-founder & Engineer

inklaretaal

2026 – Present

inklaretaal.nl

- Co-built a personalized Dutch AI news and learning product, in production; a Python and LLM pipeline turns the week’s news into editions tailored by profession and reading level.
- Implemented the complete Next.js subscription product with payment and onboarding flows on Supabase, Stripe, and Resend.

AI Consultant & Developer

AI Business Academy

Mar 2023 – Jan 2024

Amsterdam, Netherlands

- Designed and implemented AI solutions for client use cases aimed at process optimization and operational efficiency.
- Advised SMB clients on AI adoption and solution design, from model development to implementation.

Machine Learning Consultant

Municipality of Berg en Dal

Jan 2024

Netherlands

- Built ML models to forecast municipal incidents and public notifications (e.g. fallen trees, streetlight failures) for proactive planning.

Education

BSc, Artificial Intelligence

University of Amsterdam

Jun 2025

Amsterdam, Netherlands

Propedeuse, Physiotherapy

Amsterdam University of Applied Sciences

Jul 2022

Amsterdam, Netherlands

Additional Experience

Freelance Hospitality Services, J.M.V Services

Feb 2022 – Jun 2024

Restaurant Manager, De Toren Bistro

Jun 2019 – Aug 2021
